1. INTRODUCTION TO SARAO

The South African Radio Astronomy Observatory (SARAO, formerly in part SKA SA) is the business unit of the National Research Foundation (NRF) that houses and operates South Africa's national radio telescope shared facilities, including the MeerKAT, KAT-7, and Hartbeeshoek 26-m radio telescopes.

As a member of the international effort to build the Square Kilometre Array (SKA), which will be the world's largest radio telescope, South Africa (through the NRF's business units) is responsible for the construction and operation of the MeerKAT precursor telescope, for hosting the SKA Mid Frequency telescope, and for implementation of the African VLBI Network.

The SARAO project office has offices based in Johannesburg and Cape Town, as well as the radio-quiet SKA host site in the Karoo, 90km from Carnarvon in the Northern Cape, which hosts the Square Kilometre Array mid-frequency telescopes, MeerKAT, and KAT-7 radio telescope installations, as well as a number of guest instruments, including the HERA telescope.

2. BACKGROUND

SARAO executes all its projects and contracts by applying the Systems Engineering discipline. In support of the above responsibility, knowledge and expertise in practical Systems Engineering across a wide range of specialist technical and engineering disciplines is required. Due to current resource constraints and immediate project needs, provision of a Systems Engineer who will deliver specialised technical services to SARAO in support of the on-going work on the Africa2Moon project is required. This request is for the offered Systems Engineer to work with the Africa2Moon team.

3. SUPPLY SPECIFICATIONS

SARAO invites the submission of quotations for the appointment of a Systems Engineer with relevant radio-frequency (RF), space-system and verification experience to provide 300 hours of specialised systems-engineering support to the Africa2Moon project as per the following:

3.1. Deliverables and requirements

The consultant will provide focused systems-engineering support to maintain technical continuity and advance the Africa2Moon payload through its current development and verification activities. The scope may include the following, as directed by the Africa2Moon Project Manager:

- Assist with overall planning and coordination of the technical aspects of the project.
- Reviewing, refining and managing the Africa2Moon payload requirements baseline, including requirements allocation, traceability, assumptions and system and subsystem design-to specifications.
- Reviewing and updating the functional and physical architecture of the Africa2Moon payload, including interfaces between the BALLS antenna units, lander, power, communications, mechanical and thermal elements, and maintaining relevant interface control documentation.
- Supporting engineering analyses and risk assessments relevant to payload performance, RF compatibility, electromagnetic interference, mechanical integration, thermal survivability, deployment and lunar environmental constraints.
- Preparing or reviewing verification planning and test documentation, including verification matrices, test instructions, acceptance test procedures and qualification test procedures, with traceability to approved requirements.
- Reviewing available structural, electronics, RF, electromagnetic-compatibility and endurance-test evidence; recording findings; and supporting the preparation of acceptance or qualification test reports where required.
- Maintaining sound configuration management for the Africa2Moon technical baseline, including product structures, controlled technical documents and the status of requirements, interfaces, risks and verification evidence.
- Supporting the management of baseline changes, engineering change proposals, change notices, non-conformances, waivers and concessions, where applicable.
- Providing systems-engineering advice to the Africa2Moon Project Manager and technical team, including focused inputs to technical plans, work breakdown structures, statements of work, schedules, design reviews and engineering decisions.

Because the assignment requires close interaction with the Africa2Moon team and continuity with work already undertaken on the project, the bidder must propose one named Systems Engineer for the full 300-hour assignment. The proposed resource must be experienced in systems engineering for RF, digital signal processing, control and monitoring, radio-

astronomy, satellite or space-related systems and must be able to become productive without a material project-familiarisation period.

NOTE: The quotation must identify the single resource proposed for the assignment. Substitution will require SARAO's prior written approval and any substitute must meet the same requirements and provide equivalent continuity of project knowledge.

Given the interrelated nature of the payload and the limited 300-hour allocation, the successful service provider must demonstrate that the proposed resource has:

- Specialisation and practical experience in systems engineering.
- A proven track record in the design and development of RF, digital signal processing, radio-astronomy, satellite, space, avionics or comparable multidisciplinary electronic systems.
- Practical experience in the integration, test and verification of multidisciplinary systems incorporating RF, digital/electronic and mechanical elements.
- Experience in requirements management, architectural design, interface definition, verification planning, technical baseline establishment and engineering change control.

Key notes for bidder's attention;

- **Timelines:** The commencement date and kick-off meeting will be confirmed following award. The 300 hours will be scheduled on demand, in consultation with the Africa2Moon Project Manager, and must be completed within the contract period stated in the purchase order.
- **Resource deployment:** The working arrangement will be hybrid. Services are expected to be delivered primarily remotely, with attendance at SARAO's Liesbeek House office in Mowbray, Cape Town, or another agreed project location when required. Any in-person sessions will be agreed in advance.
- **IT infrastructure:** When working at SARAO premises, SARAO will provide access to the required workspace and authorised data infrastructure. The Systems Engineer must provide their own computer and comply with applicable SARAO information-security and access requirements.
- **Workload:** The total authorised effort is 300 hours. Hours will be used on demand and may vary according to project priorities. Work may not exceed the 300-hour ceiling without prior written approval and an appropriate contractual amendment.
- **Sustenance and travel:** No travel or subsistence is included unless SARAO requests and approves travel in writing in advance. Approved travel and subsistence, if any, will be managed in accordance with applicable NRF/SARAO rates and rules.

- **Delivery format:** All deliverables must use the formats and templates prescribed by SARAO and must be submitted in editable source format and, where required, as signed PDF files for incorporation into the project configuration and document-management systems.
- **Contract terms:** SARAO may terminate the contract or appoint an alternative service provider if the required services or agreed deliverables are not provided.
- **Payment terms:** Invoices must be submitted monthly in arrears and accompanied by a detailed timesheet and a brief record of work completed, certified by the Africa2Moon Project Manager. No advance payments will be made, and total invoiced time may not exceed 300 hours without prior written authorisation.

A confidentiality agreement will be signed by the relevant parties upon acceptance of the quotation by SARAO.
